
Arithmetic Progression

Grade 10, topic :3 (Maths 1)

Topics

1. Sequence
2. Terms in a sequence
3. Arithmetic Progression
4. n^{th} term of an A.P.
5. Sum of n terms of an A.P.
6. Application in real life

Do you remember these ?

What comes next? Draw it!

Do you remember these ?

Logical sequence

Alternatives

A

B

C

D

E

F

G

Can you solve these mentally ?

a) 2, 4, 6, 8, 10, ...

b) 1, 3, 5, 7, 9, ...

c) 99, 199, 299, 399, 499, ...

d) 3, -5, 7, -9, 11, ...

e) $2, \frac{3}{2}, \frac{4}{3}, \frac{5}{4}, \frac{6}{5}, \dots$

f) 1, 4, 9, 16, 25, ...

g) 0, 2, 6, 12, 20, ...

h) $1, \frac{2}{3}, \frac{4}{9}, \frac{8}{27}, \frac{16}{81}, \dots$

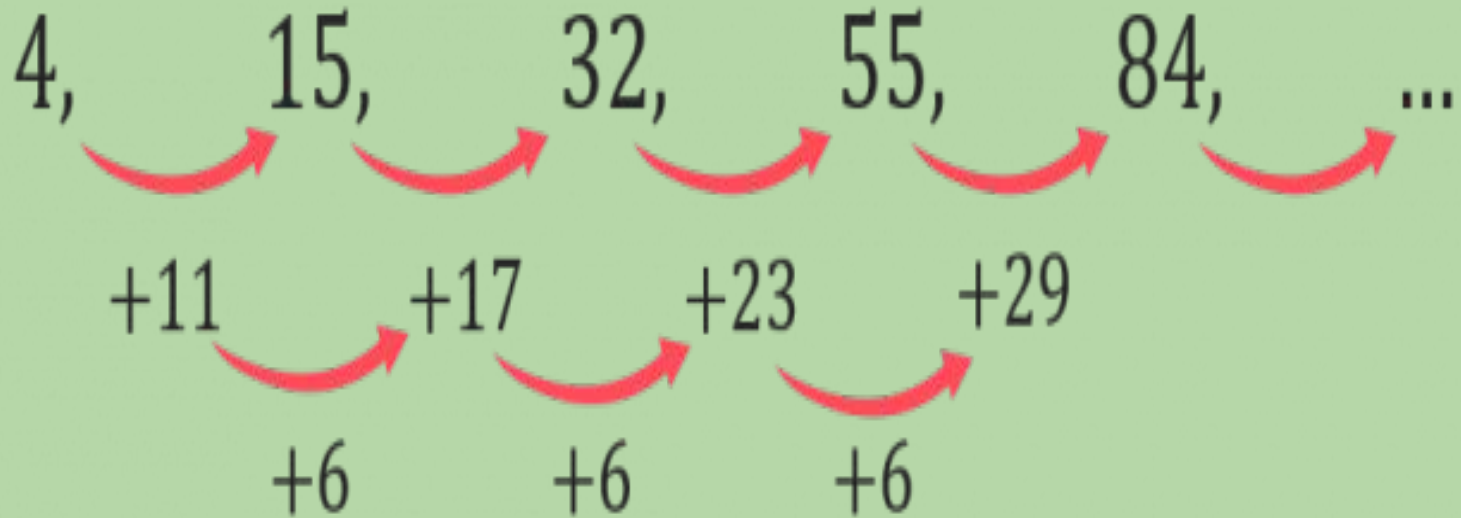

i) 6, 12, 20, 30, 42, ...

j) $\frac{2}{3}, \frac{3}{2 \times 4}, \frac{4}{3 \times 5}, \frac{5}{4 \times 6}, \frac{6}{5 \times 7}, \dots$

k) $0, \frac{1}{3}, 0, \frac{1}{3}, 0, \dots$

l) $-\frac{1}{2}, \frac{2}{5}, -\frac{3}{8}, \frac{4}{11}, -\frac{5}{14}, \dots$

Observe the changes

Now try to understand how the numbers Change

Increasing Arithmetic Sequence

* Common difference is positive!

5 , 9 , 13 , 17 , ...

+4 +4 +4

Decreasing Arithmetic Sequence

* Common difference is negative!

20 , 17 , 14 , 11 , ...

-3 -3 -3

Observe the changes

2, 6, 10, 14, ...

Common difference

First term, a_1

6, 13, 20, 27, 34, ...

+7

+7

+7

+7

d

Common difference, $d = 7$

Sequences

A sequence is a list of numbers that follow a certain rule.

Arithmetic Sequences

In an Arithmetic Sequence the difference between one term and the next is a constant.

$$a, a + d, a + 2d, a + 3d, \dots$$

The n^{th} term, $a_n = a + (n - 1)d$

Example: 1, 5, 9, 13, 17, ...

Terms in a sequence

Sequences of Numbers

Definition A **sequence** (x_1, x_2, x_3, \dots) is a rule that assigns to each natural number n , the number x_n .

- Examples**
- 1 $(1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \dots)$
 - 2 $(1, 1.4, 1.41, 1.414, 1.4142, \dots)$
 - 3 $(1, -3, 5, -7, 9, \dots)$

Definition of a sequence

A sequence is made up of terms, separated by commas:

1, 2, 3, 6, 11, 23, 47, 106, 235, ...

↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓ ↓
 $x_1, x_2, x_3, x_4, x_5, x_6, x_7, x_8, x_9, \dots$

Term number → **x_8** } Term

The position of a term in a sequence is denoted by a subscript.
Here 106 is the 8th term (x_8)

Terms in a sequence

Find the value of the 100th term of this sequence:

15, 9, 3, -3, -----

A.c

Term	Value
$n = 1$	15
$n = 2$	9
$n = 3$	3
$n = 4$	-3
.....
n	$15 - (n-1)6$

$\left. \begin{array}{l} 15 \\ 9 \\ 3 \\ -3 \\ \dots \end{array} \right\} \begin{array}{l} -6 \\ -6 \\ -6 \\ \dots \end{array} = 15 + 1(-6)$

Term	Value
1	$15 - (0) \cdot 6$
2	9
3	3
4	-3

100TH TERM IN A SEQUENCE

KHANACADEMY $15 - 3 \cdot 6$

To calculate terms in a sequence

- **Find the first four terms of the sequence**

$$a_n = 3n - 2$$

$$a_1 = 3(1) - 2 = 1 \quad \text{First term}$$

$$a_2 = 4 \quad \text{Second term}$$

$$a_3 = 7 \quad \text{Third term}$$

$$a_4 = 10 \quad \text{Fourth term}$$

More examples

Write the first six terms of the sequence.

a. $a_0 = 1, a_n = a_{n-1} + 4$

b. $a_1 = 1, a_n = 3a_{n-1}$

SOLUTION

a. $a_0 = 1$

$$a_1 = a_0 + 4 = 1 + 4 = 5$$

$$a_2 = a_1 + 4 = 5 + 4 = 9$$

$$a_3 = a_2 + 4 = 9 + 4 = 13$$

$$a_4 = a_3 + 4 = 13 + 4 = 17$$

$$a_5 = a_4 + 4 = 17 + 4 = 21$$

b. $a_1 = 1$

$$a_2 = 3a_1 = 3(1) = 3$$

$$a_3 = 3a_2 = 3(3) = 9$$

$$a_4 = 3a_3 = 3(9) = 27$$

$$a_5 = 3a_4 = 3(27) = 81$$

$$a_6 = 3a_5 = 3(81) = 243$$

Arithmetic sequences

An arithmetic sequence or arithmetic progression (AP), is a sequence whose terms go up or down by constant steps i.e. there is a common difference.

Examples:

(i) 5, 7, 9, 11, 13,

(ii) 88, 78, 68, 58, 48,

- The first term of an AP is denoted by a : $u_1 = a$
- The common difference is denoted by d : $u_{n+1} = u_n + d$
- Formula for the n^{th} term of AP is $a + (n - 1)d$
- n^{th} term: $u_n = a + (n - 1)d$ or $a + d(n - 1)$

Arithmetic sequences

Arithmetic Sequences intro

 Khan Academy

Sequence

$$\{a_k\}_{k=1}^4 = \{1, 4, 7, 10\}$$

Finite Sequence

$$a_1 = 1, \quad a_k = a_{k-1} + 3$$
$$k=3, \quad a_3 = a_2 + 3 = 7$$

$$\{a_k\}_{k=1} = \{4, 7, 10, 13, \dots\}$$

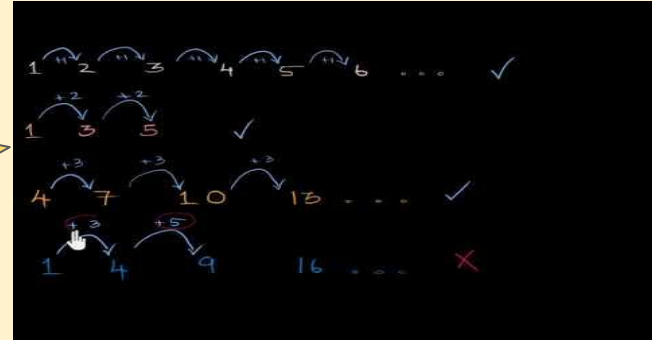

Infinite Sequence

Sequence : A set of numbers where the numbers are arranged in a definite order.

अनुक्रम: संख्याओं का एक समूह जहां संख्याओं को एक निश्चित क्रम में व्यवस्थित किया जाता है।

Watch the video

What is arithmetic progression ?

How many terms in a sequence ?

$$t_n = a + (n-1)d$$

$$- 61 = 107 + (n-1)6$$

$$- 168 = (n-1)6$$

$$28 = (n-1)$$

$$\boxed{n = 29}$$

To calculate the nth term in the sequence

kotak
Education Foundation

How to find the Nth term of an AP. एक एपी के Nth term को खोजने के लिए।

4, 7, 10, 13, ... 30 terms
Find the 19th & 23rd terms.

1 st	4		19 th →	4 + (18) 3
2 nd	7	= 4 + 3		<u>59</u>
3 rd	10	= 4 + 3 + 3	23 rd →	4 + (22) 3
4 th	13	= 4 + 3 + 3 + 3		

To calculate a particular term in an AP

Find the 9th
term in the
sequence

21, 17, 13, 9, 5...

$$a_n = a_1 + (n - 1)d$$

$$a_n = 21 + (n - 1)(-4)$$

$$a_n = 21 - 4n + 4$$

$$a_n = -4n + 25$$

$$a_9 = -4(9) + 25$$

$$a_9 = -19$$

Sum of n terms of AP:

$$S_n = \frac{n}{2} [2a + (n - 1) d]$$

S_n → Sum of a term of A.P.

a → First term of A.P.

d → Common difference

n → Number of terms

Explain and Elaborate

Sum of n terms in the
AP series
एपी श्रृंखला में n terms
का योग

Arithmetic Seq:
 $a, a+d, a+2d, a+3d, \dots, a+(n-1)d$
 $\leftarrow a_1 \quad \leftarrow a_2 \quad \leftarrow a_3 \quad \leftarrow a_n$

Arithmetic Series
 $S_n = (a) + (a+d) + (a+2d) + \dots + (a+(n-1)d)$
 $S_n = [a+(n-1)d] + [a+(n-2)d] + [a+(n-3)d] + \dots + (a)$

$$2S_n = 2a + (n-1)d + 2a + (n-1)d + 2a + (n-1)d$$
$$a+d + a+(n-1)d = 2a + d + (n-1)d = 2a + nd - d = 2a + (n-1)d$$

$$2S = n [2a + (n-1)d]$$
$$S = \frac{n}{2} [2a + (n-1)d]$$

The sum of first n terms of AP

$$S = \frac{n}{2} [a + a + (n-1)d]$$
$$S = \frac{n}{2} [a + a_n]$$
$$a_n = l$$
$$S = \frac{n}{2} [a + l]$$

Can we fill up the blanks orally ?

5. Complete the following activity to find the sum of natural numbers between 1 and 140 which are divisible by 4.

Between 1 and 140, natural numbers divisible by 4

4, 8, , 136

How many numbers ? $\therefore n = \square$

$n = \square$, $a = \square$, $d = \square$

$$t_n = a + (n-1)d$$

$$136 = \square + (n-1) \times \square$$

$$n = \square \rightarrow S_n = \frac{n}{2} [2a + (n-1)d]$$

$$S_{\square} = \frac{\square}{2} [\quad] = \square$$

Sum of numbers from 1 to 140, which are divisible by 4 = \square

An example

Example #2: Find the sum of the first 60 terms of the following series.

$$9 + 14 + 19 + 24 + \dots + 289 + 294 + 299 + 304$$

Step #1: Identify the variables.

$$n = 60, \quad a_1 = 9, \quad a_{60} = 304$$

Step #2: Substitute and evaluate.

$$S_n = \frac{n}{2}(a_1 + a_n)$$

$$S_n = \frac{60}{2}(9 + 304) = 30 \times 313 = 9390$$

Formulae that you need to remember

$$t_n = a + (n-1)d$$

$$S_n = \frac{n}{2} [2a + (n-1)d]$$

$$S_n = \frac{n}{2} [a + l]$$

Thank you
